

Fund Overview

After a bumpy start to the month, investors across the world steadily piled back into equity markets as they seemed to be somewhat calmed by expectations of inflation subsiding. It is possible that many investors had already priced future interest rate hikes into their decision making. If those hikes are now likely to be lower than previously expected, the knock-on effect would be positive. The lower future borrowing costs for companies makes capital investment more likely, which should in turn help economies globally.

Against this backdrop, the benchmark UK, US and EU large cap markets rose 2.2%, 8.7% and 8.8% over the month, which was close to a reversal of September's market moves. The Atlantic House Defined Returns Fund rose 4.5%, again close to a reversal of September's fall. Year-to-date the UK is down 0.6%, US down 18.7%, EU down 14.7% and the Fund down 3.5%.

The Fund's performance is logical in relation to its equity market sensitivities ('delta'), the main ones being the UK, US and EU large cap indices. As the markets rose the sensitivities to those markets decreased over the month, also causing the cover to the positive return barriers of the Fund's investments to widen (that is giving the investments a larger buffer to succeeding).

A decrease in implied volatility in the second half of the month also provided a small amount of additional uplift to the value of the investments in the Fund.

By the end of October, the Fund had, on average, 22.5% (up from 17.4% at end of September) cover to positive return barriers. The average cover to capital protection was 30.2% at month end (up from 25.6% at end of September). We therefore remain confident that the Fund is well-positioned to achieve its long-term target return.

Forward Looking Scenario Analysis

The scenarios presented are an estimate of future performance based on current derivative market conditions and are not an exact or reliable indicator. What you get will vary depending on how the market performs and how long you keep the investment.

Although the Fund has a medium to long-term objective to deliver an annualised return of 7-8% over the long term, the scenario analysis is calculated over shorter term periods for greater accuracy.

Market Move	-40%	-30%	-20%	-10%	0%	10%	20%	30%	-40%
3 months	-24.62%	-14.04%	-5.13%	2.13%	8.18%	11.61%	13.43%	-24.62%	-14.04%
1 year	-23.07%	-10.63%	-1.01%	6.57%	12.32%	15.77%	17.76%	-23.07%	-10.63%
2 years	-21.76%	-4.38%	5.30%	13.00%	18.18%	21.37%	23.10%	-21.76%	-4.38%
3 years	-19.20%	0.89%	11.82%	19.21%	24.29%	27.16%	28.69%	-19.20%	0.89%

The Fund's actual returns may differ from the estimates shown above and are subject to daily price movement. Future performance may also be subject to taxation, that could change in the future. The value of investments can go down as well as up and you may not get back the full amount invested.

Performance Indicators if Assets Held to Maturity

The table below is a snapshot of the current shape of the Fund. Along with other calculations, these performance indicators are constantly monitored and analysed aiming to best achieve the Fund's objectives.

Market Move	-20%	-10%	0%	10%	20%
Estimated Fund Move Assets Held to Maturity	22.1%	35.8%	30.1%	18.6%	13.7%
Average Time to Holdings' Maturity (years)	4.48	4.08	3.07	1.40	0.69
Equivalent Annualised Return	4.6%	7.8%	9.0%	13.0%	20.5%

Estimated Fund Move or 'Intrinsic Value'

The intrinsic value is the aggregate terminal value of the Fund considering estimated fees over the relevant period. The table above shows that, for example, if an investor bought the Fund today and none of the markets on which the investments were based moved between now and when the investments mature, the Fund would increase by 30.1%, a terminal value of GBP 2.1610 (based on current NAV of GBP 1.6610). What this does not tell us is the yield that is represented by these intrinsic values.

Performance Indicators if Assets Held to Maturity (Continued)

Average Time to Holdings' Maturity

The table overleaf also shows the weighted average time to maturity of the investments held within the Fund. Currently this is 3.07 years because, at current market levels, most of the current investments are likely to mature within 2 to 4 years. This number gives the investor an idea of how long it will take for them to earn the Equivalent Annualised Return.

Equivalent Annualised Return

The table also shows the current expected return of the Fund considering estimated fees for certain movements in the underlying indices. For example, if markets do not move, we would expect the Fund to yield 9.0% given its current make-up. You can also see that we would now expect a positive return even if the market falls 20% and then stays at that level until all investments mature.

Key Risks

This is a marketing communication. A final investment decision should not be contemplated until the risks are fully considered. A comprehensive list of risk factors is detailed in the Risk Warnings Section of the Prospectus and the Supplement of the Fund and in the relevant key investor information document (KIID). A copy of the English version of the Supplement, the Prospectus, and any other offering document and the KIID can be viewed at www.atlantichousegroup.com and www.geminicapital.ie. A summary of investor rights associated with an investment in the Fund is available in English at www.geminicapital.ie.

Calculations do not consider credit spread movements of the issuers of the securities. The Mark to Market of the securities and therefore the NAV of the Fund will decrease as credit spreads widen and vice versa if spreads narrow.

The value of investments and income from them can go down and you may get back less than originally invested. There is no guarantee that the Fund will achieve its objective. The level and basis of tax is subject to change and will depend on individual circumstances.

The Fund invests in derivatives for investment purposes, for efficient portfolio management and/ or to protect against exchange risks. Derivatives are highly sensitive to changes in the value of the asset from which their value is derived. A small movement in the value of the underlying asset can cause a large movement in the value of the derivative. This can increase the sizes of losses and gains, causing the value of a derivative investment to fluctuate and the Fund could lose more than the amount invested.

The Fund invests in high quality government and corporate bonds. All bonds will be rated at least A- by Standard and Poors at outset. If any of the bonds the Fund owns suffer credit events the performance of the Fund could be adversely affected.

Other risks the Fund is exposed to include but are not limited to, credit and counterparty risk, possible changes in exchange rates, interest rates and inflation, changing expectations of future market volatility, changing expectations of equity market correlation and changing dividend expectations.

A decision may be taken at any time to terminate the arrangements for the marketing of the Fund in any jurisdiction in which it is currently being marketed. Shareholders in affected EEA Member State will be notified of any decision marketing arrangements in advance and will be provided the opportunity to redeem their shareholding in the Company free of any charges or deductions for at least 30 working days from the date of such notification.

Important information
