Monthly commentary

The Dynamic Duration Fund was flat for the month of August, with the risk positions losses offset by the cash base gain. Within the risk positions, the sterling fixed income position gained, and the sterling inflation position lost, while both the dollar fixed income position and the dollar inflation position were negative.

The current signals are 4/6 for the US and 3/6 for the UK, so we are on average slightly longer fixed income than a passive fixed income position with similar volatility.

There were no changes to our signals for the month of August. US inflation is steadily reducing in response to Fed monetary policy, although there are still signs of sticky services inflation. The state of prices in the UK economy is more concerning for the Bank of England. Core UK CPI is and BoE Chief Economist's "Table Mountain" profile of policy interest rates looks more likely that the more benign "Matterhorn" profile hoped for.

3 key signals

①

Inflation Trend

Change over 6-months in headline inflation year-on-year rate

②

Market Inflation Credibility

Market real yield on the current 10-year inflation-linked bond

③

Central Bank Credibility

Core inflation year-on-year rate – official core inflation target rate

Current signals and last change

Each of the 3 signals has a potential value of 0, 1, or 2 for a combined signal value out of 6. The higher the combined signal, the higher the strategy's positioning towards Rates and lower to Inflation, and vice versa. This table shows the current signals for both the UK and US based on the latest monthly data available. Also shown is the date at which the last Signal change took place.

		Market data			Signal output				Portfolio Weight %	
United Kingdom (UK)		Signal 1	Signal 2	Signal 3	Signal 1	Signal 2	Signal 3	Combined	Rates*	Inflation
Date	Month	CPI change last 6 months	Real yield 10y inflation linked bonds	UK core CPI (BoE target: 2%)	Inflation Trend	Market Inflation Credibility	Central Bank Credibility	Signal	Rates*	Inflation

Signal evolution: portfolio weightings

The signals drive the risk weighting of the portfolio between 'Rates' (Interest Rate Swaps) and 'Inflation' (Inflation Swaps), across both the UK and US markets equally. For each of the UK and US portfolios, a signal of 0/6 indicates 100% investment in Inflation, while a signal of 6/6 indicates 100% investment in Rates. The evolution of the rules-based Signals over time allows us to plot the evolution of the resulting portfolio weights over the same period.

*The fund uses leverage to gain twice the exposure to Rates via interest rate swaps; the fund's notional exposure to rates is double that shown.

Predictability grid

Based on the signals and positioning of the fund today, we can use derivative pricing models to estimate the sensitivities of the fund to future movements in rates and inflation in the following grid. This shows the potential impact on the fund performance of changes in both the interest rate swap rate and the inflation swap rate, in the UK and the US.

		Change in 10y interest rate swap (basis points)								
		UK	3.68%	4.18%	4.43%	4.68%	4.93%	5.18%	5.68%

Key Risks

The price of shares and income from them can go down as well as up and past performance is not a guide to future performance. Investors may not get back the full amount originally invested. The level and basis of tax is subject to change and will depend on individual circumstances. There is no guarantee that the Fund will achieve its objective.

A comprehensive list of risk factors is detailed in the Risk Factors Section of the Prospectus and the Supplement of the Fund and in the relevant key investor information document (KIID). A copy of the English version of the Supplement, the Prospectus, and any other offering document and the KIID can be viewed at www.atlantichousegroup.com and www.gemincapital.ie. A summary of investor rights associated with an investment in the Fund is available in English at www.gemincapital.ie.

The Fund is entitled to use derivative instruments for investment purposes and for efficient portfolio management and/ or to protect against exchange risks. Derivatives may not achieve their intended purpose. Their prices may move up or down significantly over relatively short periods of time which may result in losses greater than the amount paid. This could adversely impact the value of the Fund. The Fund may enter into various financial contracts (derivatives) with another party. Where the Fund uses futures or forward foreign currency contracts (derivatives), it may become exposed to certain investment risks including leverage, market, mismatching of exposure and/or counterparty risk, liquidity, interest rate, credit and management risks and the risk of improper valuation. Any movement in the price of these investments can have a significant impact on the value of the Fund and the Fund could lose more than the amount invested.

The Fund invests in government bonds. All bonds will be investment grade (i.e. at or above S&P rating BBB- or deemed equivalent). If any of the bonds the Fund owns suffer credit events the performance of the Fund could be adversely affected.

In certain market conditions some assets in the Fund may become less liquid than at other times so selling at their true value and in a timely manner could become more difficult. Other risks the Fund is exposed to include but are not limited to are possible changes in interest rates, changing expectations of future market volatility. Future legal or regulatory change could have a significant effect on the Fund.
